## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election without traverse of group I in the reply filed on October 05, 2007 is acknowledged.
2. This application contains claims 6-13 are drawn to an invention nonelected without traverse in the reply. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

### ***Claim Rejections - 35 USC § 112***

3. Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is vague and indefinite as to what "etching factor" is referring to? Clarification is required.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 53-77848 or JP 2000-345373.

JP 53-77848 submitted by Applicant, discloses a metal foil (1) that is photo-etched to form via hole.

The metal foil having the via hole is formed by a tow-step photo-etching method (Figs. 2 & 3).

The Japanese reference although does not specifically teach the axis of the via holes in the two steps (or axis of the cavities). The examiner however is taking the position that one of ordinary skill in the art would choose a desirable via hole or cavity dimension because modifying such is just a matter of design choice.

Furthermore, Applicant in claims 4 & 5 include some processing steps, such as ".....by primary etching" and " ..... second etching", etc. Applicant is reminded that it is the product itself which must be new and unobvious, see *In re Pinkington* 162 USPQ 145, 147 (C.C.P.A. 1969). Product by process claimed are not patentably distinct over product claims unless it can be shown that the product produced by the process is in some manner measurably distinct from the product produced by another process, therefore there will be no weight given to the product by process verses product claims.

JP 2000-345373 also submitted by Applicant, teaches a metal thin board that is etched on both front and back surfaces to form cavities. The etching performed through a photoresist layer having a pattern.

The prior art reference does not disclose the dimensions of the cavities. The examiner is taking the position that choosing a desired cavity size is just a design choice.
